

Smart Home Living

Everyday living is easier and elevated with smart technologies.

A flawless network and controlled lighting enhance a home office. Wellness, energy and security technology solutions provide confidence and comfort. High-definition audio/video and a stylish home theater create incredible family entertainment!

SuRe InnoVations seamlessly integrates a wide array of smart offerings into indoor and outdoor living spaces. Our responsive, knowledgeable team is comprised of the region's finest technology designers. From a project's planning phase to the final installation, we pride ourselves on providing an excellent and easy experience for every client.

Bring us the technology vision for your home. We can't wait to achieve it!

Sincerely,
Sean Sullivan and Tom Redhead

New Toys for your Nest

Lighting & Shades

Smart Lighting and Shades

Controlling lights and shades completes a home both aesthetically and operationally. In today's contemporary home, lights, shades and scene settings can easily be managed via one keypad or remote, and integrated as part of a larger home automation system.

Efficient Lighting

Program lights for one room or the entire house, for efficiency and ease. Automatic sensors turn off lights when you exit the house or a room, saving energy and cost. Dimmers always create the perfect ambiance.

Automated Shades

Available in both traditional and modern designs, automated shades offer a host of benefits. Block the sun and give your home complete privacy with a touch of a button. Programmable shades are ideal for large, hard-to-reach windows, while saving time and energy.

Circadian Rhythm

New lighting technologies recreate natural light within the home, emulating circadian rhythms. Home lighting that intelligently changes in intensity and temperature through the day can transform sleep, work, productivity and mood.

Home Networks

High-Performance Networks

Whether working, studying or relaxing, upgrading to an enterprise network that supports multiple devices operating simultaneously has never been more important. With Wi-Fi 6, the latest Wi-Fi standard, all digital devices operate with optimized multi-gigabit performance, high-speed connections and improved power efficiency.

Your home network also needs to be secure. It's of utmost importance to protect all your devices and information throughout your entire property with the highest level of encryption.

Audio

High-Performance Audio

It could be a magical act at Radio City Music Hall...or a rockin' night at the Fillmore. But the high-performance here is the audio installed in your very own living room, and the quality and clarity of today's audio brings the concert experience home to you.

Robust Aesthetics

Today's audio options have elegance. Whether you want your speakers to have soft lines and neutral colors, make a statement with bold colors and modern designs, or even disappear entirely inside a wall – there's a solution for everyone.

Performance Power

Incredible home audio begins with a good foundation, including pre-amp/processors, that translate audio from a high-resolution audio player or media streamer. High-quality cables ensure the purest sound, eliminating external interference.

Vintage to Digital

Whatever your style, you can create an extraordinary home music experience. Digital-to-analog converters transform digital music into the highest quality sounds. Or, add a luxe new turntable. Vintage vinyl is back and it's attracting all generations of enthusiasts.

Audio & Video Systems

Whole Home Audio & Video

Exceptional music and video experiences are what we seek for the heart of our homes. And technology offers incredible opportunities to seamlessly - and invisibly - integrate your home with brilliant, high-quality sound and video.

Whole Home Systems

A whole home system simplifies everything. Instead of a different device in every room, there is a central source for the audio and video system. Speakers come in a wide range of styles from wireless and architectural to small aperture and invisible.

Entertainment, All the Time

Decide which movie to watch, what playlist to turn-up, from any room in the house, and it's ready to go. All your entertainment is easily controlled from your phone, tablet or chosen specialty remote.

Music, Easy and Everywhere

Today's music listening experience is easy, fun and everywhere. High-quality speaker systems enable you to connect and stream your favorite tunes via WiFi or Bluetooth. Use an app to easily manage the music by location and device.

Home Theater

The Ultimate Home Theater Experience

Movies provide escape, inspiration, and influence on how we view the world. Dedicating a space in your home for a theater is an awesome experience for yourself, friends and family alike to come together and enjoy movies, watch a favorite TV series, or catch the latest game.

Acoustic Elegance

More than just speakers, audio solutions provide a listening experience from every angle. Designer-focused sound dampeners, hidden ceiling speakers, and powerful sub-woofers are perfectly calibrated to bring 360-degrees of audio clarity to any home theater.

Next-Level Cinema

Impeccably engineered to produce colors flawlessly from any viewing angle, custom home theaters showcase the magic of movies with 4K projectors and cinema-grade screens.

Style & Comfort

Stylish, comfortable cinema chairs add to the authenticity of the movie experience, available in a range of fabrics or leather. Now, let the magic of the movies and the advantage of your own theater space take over.

Outdoors

Entertain Outdoors, Exceptionally

Entertaining in the great outdoors requires thoughtful new technology that thrives amidst weather and a home's setting. Outside gatherings take on a new level of ease and enjoyment with superior video, directional audio and ambient lighting.

All-Weather Audio

When relaxing by the pool, stream your favorite playlist with crystal clarity. Powerful, all-weather speaker options come in a range of designs for patios, outdoor rooms or large yards, blending invisibly into natural surroundings.

Outdoor Video

Plan a backyard movie party, projecting shows on a large outdoor screen or watch on an all-weather television. Offering excellent image quality, these screens are designed specifically to withstand the elements.

Ambiance Lighting

Lighting gives evening entertaining a new dimension. Whether your style is enchanting, classic or bold, smart outdoor lighting uses tiny, powerful LEDs to set the mood you want and can be controlled at the touch of a button.

Living Well

The Healthiest Home

Cleaner air, water and energy can positively transform daily living. Drink the purest water, breathe air free of dangerous pollutants, and relax, knowing that your home is as safe as possible. Consider taking control of how your home is powered, too. New home battery technology is reliable, accessible and an intelligent choice.

Smart Energy

Imagine powering your home with smart, clean and safe home energy. Consider the ultimate battery for the home, enabling you to safely manage energy on your terms. Keep your home powered and protected during grid outages and beyond.

Pristine Water

State-of-the-art point of use and whole house water purification systems remove most all waterborne contaminants such as toxic chemicals and pathogenic bacteria, ensuring that water is as pure as possible - even better than bottled.

Pure Air

Protect your home from harmful contaminants with a whole-house air purifier that delivers the cleanest air and reduces the particulate level by up to 95%. These systems monitor, control and purify over 99% of potentially harmful ultrafine particles, microorganisms and volatile organic compounds.

The background of the image shows a modern interior. On the left, a wall is covered in a grid of small, colorful circular lights in various colors like red, blue, green, and yellow. In the foreground on the right, there is a dark wood panel with a circular smart device mounted on it. The overall lighting is warm and ambient.

Home Automation

Every Day, Made Easy with Automation

Daily tasks become effortless and efficient with home automation, freeing up your time to do what is most important. Through a simple app on your smartphone and tablet, or from a whole home remote, control the many features of your house almost anywhere, anytime.

Programmed Lighting

With the tap of your finger, control multiple devices for any activity. As the sun rises, set an alarm, brighten the breakfast room's lights, open the window shades and turn on the morning news. The possibilities are endless.

Scene Setting

The right lighting provides the perfect ambiance to what ever you're doing. Whether it's warmly lit accent lighting for a romantic dinner, or a bright scene to show off your new kitchen, different lighting scenes make it easy to set the perfect mood.

Safe and Sound

Using a single command you can arm your entire security system, and have instant access to all your surveillance cameras to keep an eye on everything. It can even prepare for your arrival by disarming the alarm, unlocking the door, adjusting your thermostat and lighting your way into the house.

Voice Control with Privacy and Ease

New voice control technologies provide sleek designs, personalization and strict privacy settings. There is complete comfort knowing that your data will never be used or sold. These choice voice-control products integrate seamlessly with home automation systems and other smart home products. Simply tell your smart device what needs to be accomplished and it's done.

Home Security

The Smart Home is the Safest Home

With smart technology comes worry-free living - no matter where you are. Homeowners are now opting for the ease of wireless, low-profile security systems, which instantly provide alerts and incredible detail when issues arise. Be safe, secure and in control.

Advanced Security

Today's smart systems offer options for sirens, audio and video. These smart devices can sense when windows are opened or closed, as well as any motion in your house. Be alerted immediately to security breaches and access detailed information via an app.

Smart Home Detectors

Additional customizable home safety features include smart thermostats and detectors for carbon monoxide and smoke. Monitor your plumbing systems for leaks, signs of mold, and detect floods caused by storms.

Vacation Anywhere

The best part is you have total control. Vacation anywhere, knowing that at anytime you can tap a mobile app and visually check on the status of your home's security, adjust lighting and temperature, and know that all is well.
